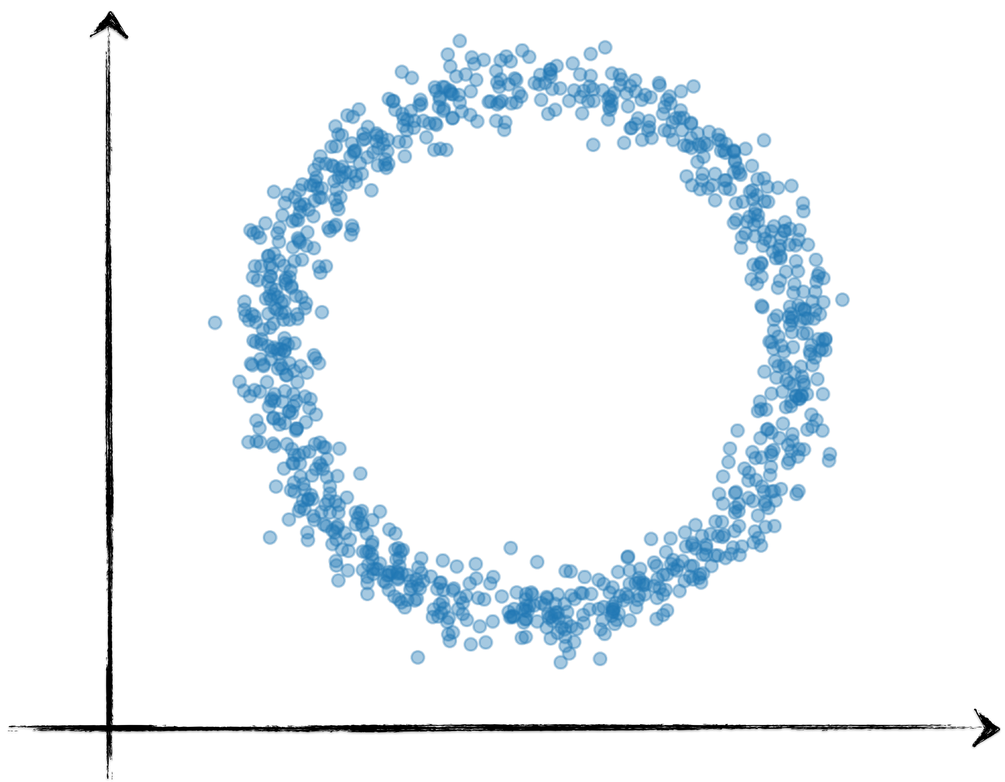
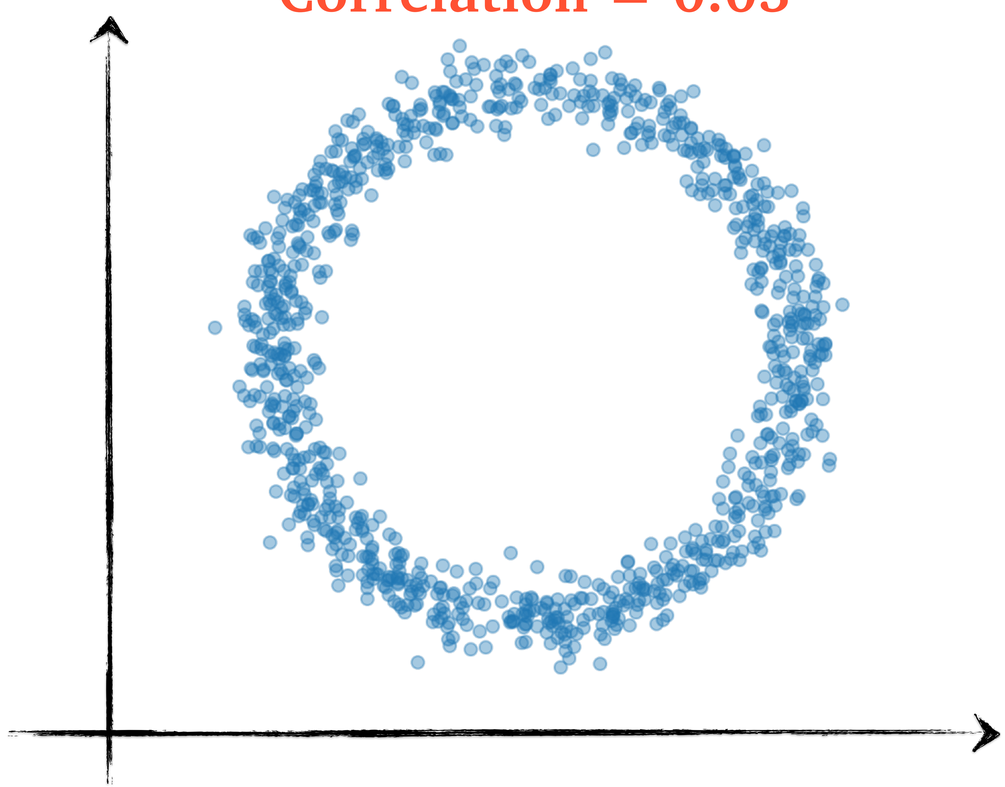
Why Linear Statistical Dependence Is Not Enough ?

$$\textbf{correlation} = \frac{\textbf{Cov}(X, S)}{\sigma_X \, \sigma_S} = \frac{\mathbb{E}\left[(X - \mu_X)(S - \mu_S)\right]}{\sigma_X \, \sigma_S}$$



Why Linear Statistical Dependence Is Not Enough ?

$$\textbf{correlation} = \frac{\textbf{Cov}(X, S)}{\sigma_X \, \sigma_S} = \frac{\mathbb{E}\left[(X - \mu_X)(S - \mu_S)\right]}{\sigma_X \, \sigma_S}$$


Correlation = 0.03
